III. 1 What did you like about the class?

I liked that the instructor added a lot of real-world information about project management and when you would use the different features.
Prof is very patient and ensures students are on the same page. He is very thorough.
The professor was very hands on and engaging. Encouraged us to think critically about project management skills/best practices in addition to PM software solutions.
It was very hands on, actually working on exercises from the book and the instructor was very helpful.
A good overall tour showing what MS Project can do.
Discussion about key Project management issues and how the software addresses these issues. I feel like I have more insight into project management as well as the software! Nice to have an instructor who was actually involved in project management.
The class is very interesting. I was completely unfamiliar with the MS office project. Now I have a very good basic knowledge about it.

III. 2 What didn't you like about the class?

Nothing
The book was a little vague sometimes in how to go about executing a practice. Might be helpful to have a step-wise layout of how to complete exercises.
It was sometimes difficult to navigate the program if not used to it. But at the same time, playing with a program is the best way to learn in my opinion.
The exercises in the book are hard unless the student goes back and refers to the step-by-step earlier in the chapter.
I need an extra break in morning
All the contents such as how to create a schedule, how to format it, how to manage the cost, scope and time of a project.

III. 3 What improvements would you suggest?

nothing
Building your own WBS and project from scratch and then going through the exercises.
If the course were longer; maybe add a different kind of exercise where the student is not given step by step instructions to modify a parameter but must figure it out.
Tell Microsoft to create keyboard shortcuts to replace relentless mouse clicks.
adding a few breaks
The teacher needs to be more detailed and provide more examples.

III. 4 What other classes would you like to see offered?

don't know
More sections on risk management. And perhaps budget tracking/development for PM.
The list of classes seems quite extensive and complete.
