III. 1 What did you like about the class?

This was a very hands on class that was fast paced and exciting each session.

Learned a lot about html5 and using dreamweaver I never would have been able to figure out on my own.

Fast moving, covered a lot of areas.

The instructor was really great and knows his subject. He is stimulating students and that's important for a night class.

Professor Burnett was very patient and explained things very thoroughly. His Powerpoints were also very detailed and had useful information. Our class also was pretty good about collaborating. When a classmate got stuck or confused, others would offer help. It was a good environment to learn in.

Good Instructions and explanations about every chapters

good overview of HTML5.

I felt like I got the basic gist of I need to do with HTML 5 and CSS

The location is close to work.

III. 2 What didn't you like about the class?

I wish it was a bit longer.

the pace would slow down due to students who just "didn't get it" or were falling behind, causing the instructor to have to pause the lesson to help them.

Fast moving :-).

Some students had not the required level to follow the pace of the class. That affected the class and we couldn't go over the last lesson.

Sometimes it was a bit rushed. We weren't able to get to responsive web design unfortunately.

None

Fast paced. Hard to switch between computer monitor and the board. Lost place because instructor did not give enough time to follow.

I didn't like the textbook. We need a more up-to-date model to work with. I would like to have a more generic one to take with me outside of the course.

Some students seemed to struggle due to ergonomic issues related to the standard keyboard and screen equipment. This might affect older workers.

III. 3 What improvements would you suggest?

None

Faster Pace
Can't think of any.
Increase the prerequisites.
Wish the class could have gone maybe an extra week so that we'd have additional time to practice and cover the information a little more indepth.
More time
ask question more slowly: Did everybody follow what I was doing?
Better textbook, outside exercises. applying the concepts by making our own websites
For older members who might have fat fingers, you might want to give them bigger font keyboards or enable the magnifying feature in windows.

III. 4 What other classes would you like to see offered?

More programming classes in forensics and cybersecurity.
More web development courses and mobile app development.
More back end and database courses
Responsive design
-
anything, i enjoy learning it.
Some of the classes offered on Lynda that people can learn on their own related to HTML 5.

III. 5 What is (are) your reason(s) for taking this class?

Find a new career path
To learn more about web development and possible pursue this field more in the future, and to be able to make my own website for my own personal business.
Brush up on my skills for work.
Learn the difference about HTML and HTML5 and same for CSS and CSS3

Career development/advancement within my company.
Learn new things about HTML5
Get exposure to HTML
Need money - lots of it! :)
For work study and improving my understanding of coding.

IV. 1 How did you find out about this class?
