III. 1 What did you like about the class?

Professor Burnett is very knowledgeable about HTML and CSS and has an obvious passion and love of teaching. When the book was unavailable, he

went out of his way to make sure instruction was still available in print.
Good Intro to subject.
It was comprehensive. It was also very hands on.
Only 5 sessions
lab structure and professor's organization and tools (he keeps a website for the site with class material and resources)
Good amount of hands on coding experience.
I liked that Prof. Burnett modeled the coding as we went along. There was no way to do this without seeing it being done simultaneously. I got better and more confident after doing it together by the end of the class.
It was very hands-on.
Depth of topics.
I am able to learn the basic skill of html and css
Good trainer, good class mates
I liked that we went through everything step by step, and that we stopped when we were stuck.
Class was very interactive! It wasn't just sitting at a desk listening to a lecture. The instructor was very engaging which made time go by very quickly!

III. 2 What didn't you like about the class?

At times the pace was very fast and was difficult to keep up with.
People at all levels experience slow down progress
It moved too quickly.
Too fast. Not enough hands-on experience. I was just copying the instructor without understanding.
it seemed rushed after the second day
Class time being nights, but that can't be helped.
The textbook.

N/A

A little fast paced.

the speed of the professor is too fast sometimes, I am unable to catch up the coding.

pcs are very slow to load

Just the flow of it all. It was very fast paced...I was lost at times, but overall its a good class.

The bookstore was late with getting our books. I actually had to order my book using a different resource.

III. 3 What improvements would you suggest?

more coding and Q&A

More explanations of the WHY we are doing things, in addition to the HOW

Shorter exercises, create our personal website with required elements such as image, drop-down menus, banners, hyperlinks, so that we can relate to it better.

spread out the content in more classes.

I would prefer more independent work, but this likely would not be feasible in the allotted time.

N/A

Hand out solution sets ahead of time for those who have trouble keeping up with the class instruction.

have the coding handout first because it will be easier if I didn't catch up one part of the coding.

I think students should use VMs like they do in some of the other classes. It would be very helpful and the students wouldn't have to come in and re-do their dreamweaver environments at the beginning of every class.

III. 4 What other classes would you like to see offered?

How to build and maintain a website.
Don't know.

IV. 1 How did you find out about this class?

Internet / Website
