III. 1 What did you like about the class?

The website is a great resource.
Interaction, question ans answers
Too much straight lecturing
Engaging and interesting. Also, points to other sources of information gathering.
As a beginner to IT and having no experience in website design, I definitely learned a lot and the course was a good beginning point to gain general knowledge of the website design field. the instructor was also excellent and kept the students engaged and shared many great resources with us.
Lots of up to date web technology information. Simple exercises for a short course like this. Very good course slides. Teacher is very knowledgeable.
There was great practical content and information.
The instructor made you think about what you were learning by asking material related questions.
I liked the way the teacher thoroughly explained the many components of web design.
I learned a lot of practical tips for setting up an informative and attractive website. Also that it was very laidback and stress-free.

III. 2 What didn't you like about the class?

I would like this course to be a little longer. I know we can't cover everything and it was a good introduction, but there were a few topics I would have

like to cover in more detail.
Kinda far. I'm close to Takoma
Not enough hands-on activity
Short, with lot of information with the time frame.
I wish it could have been stretched out for longer than four classes to go into more specific information.
Too short. It should have at least 20 hours.
Too lecture-heavy. I would have liked to do more hands-on web development or have gone development examples with coding tutorials.
n/a
I have no dislikes
Some sections were very rushed, for instance, the html, CSS and Javascript sections. I don't think I would have gotten much from those segments if I was new to those technologies. A much higher level overview might have been more appropriate for such a short introductory level class.

III. 3   What improvements would you suggest?

Have more IT classes at Takoma
Add more interactivity (more html/css/etc. practice, plus more emphasis on designing an actual website)
May be additional couple of nights.
I would like to learn a bit more about some specific topics such as coding, the graphic design element of designing a website, etc.
Longer time, allowing more actual hands-on exercises and sharing in the class.
Add in more coding examples.
More explanation about FTP programs such as Filezilla and how it is used to upload sit pages to host accounts.
more days.
See above.

III. 4   What other classes would you like to see offered?

Java, CSS, programming
Web design with emphasis on advertising
Good follow-up courses to this one.
Joomla CMS class.
I think all the classes I want to take are already offered (HTML, Javascript, mobile web design)

IV. 1   How did you find out about this class?
