III. 1 What did you like about the class?

Very well run, exercises in class were completed successfully, class began and ended on time ...
Knowledgeable professor, relevant subject matter
The professor took time with struggling students.
Good material very knowledgeable
Learned a lot.
Plenty of one-on-one help provided despite large number of participants
pace was perfect for introductory class
Instructor was dedicated and stayed late one day. He also spent time one on one with students. Nice guy.
I learned a lot in 5 sessions that I can apply right away to expand my knowledge. The exercises were very helpful.

The knowledge and maturity of the instructor.

The way the instructor taught, hands-on, person care.

III. 2 What didn't you like about the class?

Can't think of anything negative.

Textbook was unnecessary

NA

too fast of a pace, prefer a slower pace
--

Went too fast.

students tend to talk and sometimes make it difficult to hear instructor
--

Instructor went too fast when entering the coding. It was hard to keep up. Also, did not seem like we learned from the ground up. It seemed that course material started at an "advanced" beginner level, geared toward people who are already somewhat tech savvy and familiar with material.
--

The pace of the 1st class was a little fast since it was all new material.
--

The setup. Having to create the environment every time is time consuming, confusing and unnecessary. Also, the students' knowledge and experience was not the same across the board. The instructor had to spend time taking care of some at the expense of others.

III. 3 What improvements would you suggest?

Maybe next time I'll think of something.
--

NA

offer a longer, but slower paced WD&CE course for HTML
--

Slower pace.

quite well prepared; would like to have online access to all classes so that students can decide when to access virtually
Start at the ground up. Define ALL terms and show us the very, very basics. Please go slower when typing in code. Tell us the line numbers of the source code so we know where to start.
Have students work off of a flash drive or something. Don't waste time by recreating the environment every time.
More on mobile web design would have been helpful

III. 4 What other classes would you like to see offered?

HTML5 Level III
Advanced HTML and CSS
Writing for the Web
Programming in JAVA

IV. 1 How did you find out about this class?

N/A
