III. 1 What did you like about the class?

Mr. Burnett always took the time to make sure that everyone was up to speed before proceeding to the next section
lots of hands on time and knowledgeable instructor
Hands on experience.
doing the student exercises with professor burnett
The content of the class was related to the real world.
Class exercises which went a little slower in HTML II versus I.
Learning the latest in web development from a skilled instructor.
The responsive web design, the HTML structure, and the CSS stylization.
It's a whole new world for me - and fascinating to learn what's behind the Web pages that you see.
Responsive formatting

III. 2 What didn't you like about the class?

I would prefer the ability to do more homework as opposed to everything in class

would have liked about 2 more 3 hr classes just so we could create something a bit more freeform and/or do Q&A while we experiment. Following a prescriptive website build didnt have enough trial and error.

Moves very quickly.

n/a

Moved a little too fast at the beginning and a little too slow at the end.

Class exercises and history on how web design has evolved.

This is the type of class that needs to be spread out over a longer period of time and the student needs more time for individual practice and study. The greatest benefit will come after having the time to digest the material after the class is over.

I liked everything about this class.

I'm a bit overwhelmed at times. Familiarity with the course content would certainly make the class easier.

Fast pace

III. 3   What improvements would you suggest?

If possible, the ability to access all the class material from home

Could be at least 2 evenings longer so there can be more time for Q&A

More class sessions.

n/a

More time in between classes to absorb information -- better under this course -- was a bigger issue under HTML5 I as everything was new.

Have recommendations on web design online classes.

I don't think you can really go by me - since it seems like a lot of my classmates are familiar with Web design. But access to the tools used in class would help. But honestly, if I had to try and code the exercises from scratch - I don't think I could do it without a lot more practice. I think a text with some

of the baics would help too - I did take some out from the library and found them easier to follow.

Ability to have access to Dream Weaver from home.

III. 4　What other classes would you like to see offered?

Add a "creative" design class that will allow for using the concepts covered in this class

n/a

Oracle Database Intro course

Document 508 compliant classes.

IV. 1　How did you find out about this class?

N/A
