III. 1 What did you like about the class?

I really enjoyed working with Altova and Dreamweaver. Thank you for this learning opportunity!
--

It was a good overall review of XML

I learned things.

Explanations about XML.

Overview to schemas was extremely helpful

III. 2 What didn't you like about the class?

--

The lectures were really long so sometimes I'd lose my attention.

Not enough time to learn XML.

With a class description that included "...displaying data using extensible styling language-transformation (XSL-T)" I would have expected at least an example in class of the use of an XSL-T. Instead we were presented with a lot of code with too complex concepts (XPATH, XSLT & XQUERY) in a breeze by within three hours without a single real example leaving many in the room without familiarization of the topics confused and struggling.

III. 3 What improvements would you suggest?

If some of the slides can be updated and the textbook would be more recent

Having more hands on experience would be good.

Longer course

Day five was a waste there was barely enough materials to fill one hour of a three hour class. Would recommend extending content from day two over two days possibly at the expense of day five. Using more real world examples in the explanation of the various XML technologies could be a valid substitute for what was covered on the last day.

III. 4 What other classes would you like to see offered?

XML 2, JSON

XML using data connection

Ruby on Rails

IV. 1 How did you find out about this class?
